The Kanban Service

かんばん - 看板

Kanban(かんばん-看板), Japanese word which literally means signboard or billboard, is a scheduling system for lean and just-in-time production. Kanban is a system to control the logistical chain from a production point of view, and is not an inventory control system.

The Kanban, showing the kind of product used, is placed on a bin which, once emptied, is again filled up.

This is the right mean to learn how to manage an optimal working flow within production processes, avoiding therefore an excessive stock in the warehouse and reducing the related costs and management expenses.

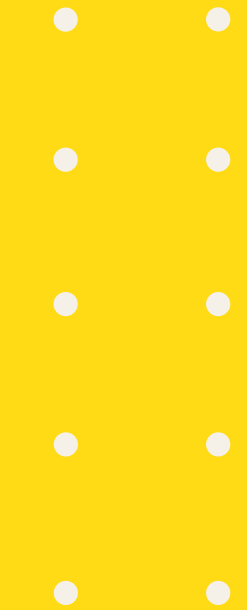

BENEFITS

Why use Kanban?

To manage an optimal working flow with delivery processes for our Customers, with the following advantages.

- 1 Improvement** of the service level
- 2 Reduction** of management **costs**
- 3 Availability** of the items and materials **only required by the process** in that precise moment

YOU CAN CHOOSE BETWEEN...

K2

Supply of the “workstations” through courier shipment (material previously placed on pallets by our operators according to our Customer’s “workstations” and finally sorted by his in-shop staff).

K3

Management with delivery service through courier.

K2

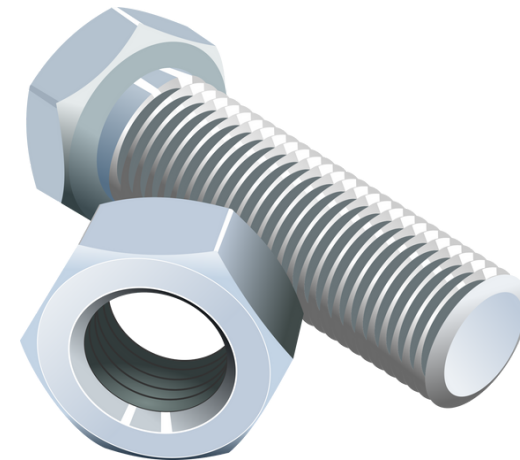

SUPPLY OF THE “WORKSTATIONS” THROUGH COURIER SHIPMENT
